Musky Defender: Now in Early Access!

Elon Musk sets out to save humanity in this brand new top-down shoot 'em up.

Davis, USA – June 11, 2019 – The year is 1097 DE (During Elon) – Elon Musk finally establishes life on Mars. But it's not safe. Our hero must smartly manage their resources as they fight off the waves of enemies to protect the evacuation. Elon theorizes Aliens will be coming for his precious Cryogenic technology. In reality, they're just salty Tesla shareholders. In any case, civilization must evacuate; destination: Andromeda.

Set in an immersive space setting, MUSKY DEFENDER builds on the popular shoot 'em up genre with an interesting twist. Our hero, stationed on Mars, fights off waves of enemies, utilizing left/right movement and rocket jumping to get around the planet. Our hero starts out with a simple laser gun. As the waves of enemies grow stronger, so does our hero, with access to upgrades and power-ups at the end of each wave. Throughout the waves the player will face enemies of varying difficulties. The player must manage their resources well and build up their arsenal before ultimately reaching a boss fight that will surely stress test their abilities.

Available on Windows, Mac, Linux, iOS, and Android, Musky Defender is taking the shoot 'em up genre by storm!
